

APPLICATION

Unbalance vibratory motors are used where mechanical vibrations are required.

Our Unbalance vibratory motors are used in Bin discharging, Dry Destoner, Tubular Feeder & Conveyors, Concrete block molding; Compaction & Vibration Table, Filter bag dedusting; Separators & screens; feeders, conveyors & spiral elevators; Seed cleaners, micronising, mixing & blending machines; Foundry knockouts etc.

For obtaining rectilinear vibrations, two unbalance motor vibrators rotating in the opposite directions are used.

Widely used in Food Processing Machineries like Bin discharging, Dry Destoner, Separators, screens and Tubular Feeder & Conveyors.

CONVEYANCE of bulk material such as coal, gravel, concrete, chips of pieces goods, such as casting, parcels etc. The above operations find use in the industries such as fertilizers, power station, foundries, chemical industries, pharmaceuticals, food stuff industries etc.

COMPACTION of concrete mixtures, bulk material such as molding sand, graphite, quartz powder, foodstuff, etc. The above operations find use in foundry equipments, automatic filling and packing machine, furnace lining, electrode manufacturing etc.

VIBRO FINISHING equipments for debarring and surface finishing of metal parts. These operations are used in auto accessories, bearing industry, ceramic components, cutlery, die casting, hand tools, press parts, sintered parts, surgical instruments, textile accessories etc.

SCREENING, DEWATERING & FILTERATION vibrating screens, grading screens, ceramic screens, vibration filters etc. The above application find in Tea industry, Sugar industry, Tobacco industry, Synthetic Ru
